

Erath & Health Haradut Damt

While watching this phenomenon many people think that it is a volcanic cone, however it's not. In fact it consists of carbonate deposits with Thermal sulfur water, which reacted with common Limestone rocks in this area (called Travertine), providing this limestone cone. the phenomenon started from Quaternary, certainly in the Recent time. Therefore this phenomenon is one of the most famous Thermal Springs in Yemen, which recently called Al-haradut Damt.(Al-harada is traditional word means the pan used to cook in).

This phenomenon is geographically located in Damt, Al-Dhali' governorate approximately 250 K.M southern the capital Sana'a. this area population has clearly influenced by this phenomenon since the 7th century B.C. , which presented by investing the nearest farmland for water benefits in agricultural irrigation instead of household uses. As a results, a belief has spread that is Thermal water has treat effects mostly known in natural heeling from some diseases such as Rheumatism, backaches, and diseases of the respiratory and digestive system which caused continuing doing these habits. It should be noticed that these beliefs are scientifically correct, proved by the results of the Italian team studies of this area in 2001. Since these studies, the honesty & correction of this belief has been ensured, witch increased the rate of visitors and tourists to this phenomenon for the propose of heeling after the scientific prove.

At last, I invite you to visit this place to enjoy the beautiful natural environment, and to experience the natural heeling that provided by the geo-procedures of the earth planet .
