

Bad planning has the following effects :

1- direct effects :-

represent in shrinkage the green spaces, and subjects to the general Desertification and the civil Desertification, and its influence on the climate.

2- indirect effects :-

- its represents the conversion of the agricultural activities to other activities, such as: random industrial and commercial activities.
- Emigration.
- Losing cultural , civil identity of the area because of the changes that had been taken place in the construction style. In addition, burial the cultural heritage such as: agriculture sciences and folk songs.
- Pollution :-air , auditory , visual.
- Extinction of several animals and insects.

We should reach our voices to rescue what is rest from natural environment body, and work together to treat as much as we can , in sake for ideal environment and generation.

Let's take place in the first row to reach our voices.
